ABOUT ME

I am a proactive & bilingual full-stack developer with a passion for cutting edge front-end technologies. In my spare time, I enjoy going to dev events (most recently Google DevFest), playing Squash, reading, and learning Magic: The Gathering. I have always had a passion for technology (both software & hardware) and am always looking for new ways to learn new skills.

EDUCATION

Mayden Academy - *Full Stack Track*

Aug 2019 - Dec 2019

I recently graduated from Mayden Academy, an intensive 16 week course where I learnt the fundamentals of programming, became a Certified Scrum Master, and worked as a team to produce 6 projects across a range of languages (PHP, JS & TS, Sass, React). You can check out my favorites below, or take a look at my portfolio: www.antonwebb.me

PROJECTS

Glass - *Cocktail Guide*

bit.ly/awglass

Uses an API to generate ingredients, instructions, and an image, all based on user input (Fetches & loads the top result). Uses Typescript to handle fetch requests & data manipulation and Sass for page styling (both compiled via Gulp).

Bread & Ifits - *Recipe Finder*

bit.ly/awbread

Fetches recipes from an API using a list of user-selected ingredients stored in an external database. Uses PHP to handle curl requests & data manipulation. The front-end is built using Bootstrap, along with Sass for page styling. Code is compiled to ES5 using Babel (via Gulp).

JOB HISTORY

French Translator - *ZigZag Education*

Summer 2018 & 2019

I recorded French GCSE and A-Level material to be used by exam boards such as EDEXCEL and AQA in official school exams. I was accepted due to my ability to speak fluent French, having lived there for 10 years.
